**Subject:** LEV III testing

Hi Joel:

For Ca only LEV III test groups. Perhaps we can use Tier II E0 to also test, but just don't have any stds, but include them on the CSI for litmus calculations. This would be similar to diesel testing where we would test for 20F to complete the litmus testing, but don't specify any std for CO.

What do you think. I'm thinking that we don't have to specify a federal std (like Bin 2 or something like that) for the SULEV 30 Ca only test group or any other federal std for the Ca only LEV III test groups.
